National River Conservation Directorate (NRCD)

The National River Conservation Directorate, functioning under the Department of Water Resources, River Development & Ganga Rejuvenation, and Ministry of Jal Shakti providing financial assistance to the State Government for conservation of rivers under the Centrally Sponsored Schemes of 'National River Conservation Plan (NRCP)'. National River Conservation Plan to the State Governments/ local bodies to set up infrastructure for pollution abatement of rivers in identified polluted river stretches based on proposals received from the State Governments/ local bodies. (www.nrcd.nic.in)

Centres for Narmada River Basin Management and Studies (cNarmada)

The Center for Narmada River Basin Management and Studies (cNarmada) is a Brain Trust dedicated to River Science and River Basin Management. Established in 2024 by IIT Gandhinagar and IIT Indore, under the supervision of cGanga at IIT Kanpur, the center serves as a knowledge wing of the National River Conservation Directorate (NRCD). cNarmada is committed to restoring and conserving the Narmada River and its resources through the collation of information and knowledge, research and development, planning, monitoring, education, advocacy, and stakeholder engagement. (www.cnarmada.org)

Centres for Ganga River Basin Management and Studies (cGanga)

cGanga is a think tank formed under the aegis of NMCG, and one of its stated objectives is to make India a world leader in river and water science. The Centre is headquartered at IIT Kanpur and has representation from most leading science and technological institutes of the country. cGanga's mandate is to serve as think-tank in implementation and dynamic evolution of Ganga River Basin Management Plan (GRBMP) prepared by the Consortium of 7 IITs. In addition to this, it is also responsible for introducing new technologies, innovations, and solutions into India. (www.cganga.org)

Acknowledgment

This report is a comprehensive outcome of the project jointly executed by IIT Gandhinagar (Lead Institute) and IIT Indore (Fellow Institute) under the supervision of cGanga at IIT Kanpur. It was submitted to the National River Conservation Directorate (NRCD) in 2025. We gratefully acknowledge the individuals who provided information and photographs for this report.

PREFACE

The Narmada River, often referred to as the lifeline of central and western India, holds unparalleled significance for the region's water resources, ecosystems, and communities. Its hydrological complexity, combined with its ecological and cultural heritage, underscores the critical need for its preservation and sustainable management. In the face of mounting challenges such as climatic variability, groundwater depletion, and increasing anthropogenic pressures, a comprehensive understanding of the Narmada River Basin's hydrology is more important than ever.

This report, centered on the hydrological characteristics of the Narmada River Basin, is an effort to provide an in-depth analysis of key parameters such as streamflow, water levels, groundwater trends, and climatic variations. Drawing on extensive data collection and advanced methodologies, it presents a spatial and temporal perspective on the basin's water resources and their interdependencies. From rainfall patterns to groundwater recharge dynamics, this report aims to uncover critical insights into the factors shaping the basin's hydrological profile.

The findings and recommendations presented in this report are intended to serve as a guiding framework for policymakers, researchers, and practitioners committed to sustainable water management in the Narmada Basin. By identifying trends and challenges, it aspires to inform climate-resilient strategies, enhance water resource planning, and support the development of policies that balance ecological preservation with socioeconomic progress.

We are deeply grateful to all individuals, organizations, and institutions that contributed to the preparation of this report. Their dedication, expertise, and support have been instrumental in shaping this study. It is our hope that this report will inspire collaborative efforts and meaningful action toward the long-term health and sustainability of the Narmada River and its basin.

INTRODUCTION

The Narmada River Basin extends from 21°40'12" to 23°41'24" N latitudes and 72°48'36" to 81°45'36" E longitudes, encompassing a total area of 97,560.80 sq. km, which constitutes about 3% of India's total geographical area (3,297,427.32 sq. km). Bounded by the Vindhyan ranges to the north, the Maikala hills to the east, the Satpura ranges to the south, and the Arabian Sea to the west, the basin lies at the northern extremity of the Deccan Plateau and covers significant portions of Madhya Pradesh and Gujarat, with smaller parts extending into Chhattisgarh and Maharashtra. The basin spreads over 39 districts, comprising 27 districts of Madhya Pradesh, six of Gujarat, four of Chhattisgarh, and two of Maharashtra. The Narmada Basin exhibits an elongated shape, stretching about 915.65 km east to west and about 236 km north to south. The basin experiences a tropical monsoon climate characterized by distinct wet and dry seasons, with average annual rainfall ranging from 800 to 1200 mm. The Narmada River, the longest west-flowing river of India, drains into the Arabian Sea near Bharuch in Gujarat and is further sub-divided into Upper, Middle and Lower Narmada River basins (Figure 1). Thus, the present volume represents the first comprehensive attempt to map the extensive and intricate river network of the Narmada Basin in as fine a detail as possible. Much of the information contained in this River Atlas has been generated from high-resolution satellite imagery and processed using advanced data and image analysis tools on a Geographic Information System (GIS) platform. While every effort has been made to ensure accuracy and completeness, minor omissions such as small or ephemeral streams may remain, which are expected to be refined and included in future versions. A river atlas attains greater significance when complemented with other natural and anthropogenic datasets such as rainfall and climatic distribution, surface water bodies, forest cover, elevation, soil types, geomorphological and physiographic features, land use patterns, pilgrimage and cultural centers, and infrastructural elements like roads and highways. These thematic datasets are being systematically compiled and will be integrated in subsequent, more comprehensive editions of this Atlas. In the meantime, it is hoped that this Atlas will serve as a valuable reference and an informative window into the Narmada River Basin's diverse, dynamic, and ecologically significant riverine system.

NARMADA BASIN: SUB-BASIN WISE RANKING OF THE TOP 10 WATER BODIES

Table 9: Sub-basin wise Top 10 Waterbodies of Narmada River Basin

Rank	Waterbody Name	Area(km ²)	Area (Ha)
Upper Narmada River Basin			
1	Bargi Dam Reservoir	833.90	83390.43
2	Tawa Reservoir	174.69	17469.29
3	Barna Reservoir	63.92	6392.28
4	Bilgaon Dam	6.48	648.51
5	Matiyari Reservoir	6.47	647.95
6	Satpura Reservoir	6.27	627.52
7	Bahuriband Tank	3.03	303.68
8	Pariat Dam	2.79	279.81
9	Sapna Dam Reservoir	2.31	231.19
10	Upper Palakmati Reservoir	2.10	210.79
Middle Narmada River Basin			
1	Indira Sagar Reservoir	913.48	91348
2	Omkareshwar Reservoir	93.36	9336
3	Kolar Reservoir	19.82	1982.78
4	Shahid Bhimnaya Lower Goi Dam	12.00	1200.31
5	Sukta Reservoir	10.06	1006.07
6	Upper Veda Dam	9.51	951.34
7	Zirabad Reservoir Man Dam	9.18	918.01
8	Nanpur Phata Dam	8.88	888.26
9	Dejla Dewda Dam	6.21	621.99

10	Datuni Dam	4.14	414.22
Lower Narmada River Basin			
1	Sardar Sarovar Dam Reservoir	2594.36	259436.39
2	Karjan Reservoir	28.06	2806.12
3	Sukhi Dam Reservoir	23.48	2348.07
4	Panchmuli Lake	2.34	234.02
5	Dholi Dam	1.51	150.92
6	Nalej Dam Gondhriya Lake	0.71	70.80
7	Zer Dam	0.59	59.12
8	Harvant	0.51	50.52
9	Targol Dam	0.38	38.46
10	Jamli Dam	0.33	33.35
